Medical threats are defined as "all potential or continuing enemy actions and environmental situations that could adversely affect the combat effectiveness of friendly forces, to include wounds, injuries, or sickness incurred while engaged in a joint operation." (Joint Publication 4-02, Doctrine for Health Service Support in Joint Operations, 30 July 2001). In DoD publications, the term is defined as a composite of all ongoing potential enemy actions and environmental conditions (disease and non-battle injuries) that may render a soldier combat ineffective. Commanders and unit leaders are responsible for protecting and preserving Army personnel and equipment against injury, damage, or loss that may result from food-, water-, and arthropod-borne diseases, as well as environmental injuries (for example, heat and cold injuries) and occupational hazards.

Users are encouraged to submit comments and recommendations to improve these publications. Comments should include the version number, page/title, paragraph, and line(s) of the text where the change is recommended. The proponent for these publications is the United States Army Center for Health Promotion and Preventive Medicine (USACHPPM). Comments and recommendations should be forwarded directly to: Commander, USACHPPM, ATTN: MCHB-CS-OHI, 5158 Blackhawk Road, Aberdeen Proving Ground, Maryland 21010--5403, or by e-mail to [USACHPPM Health Information Operations](#). If you develop new slides or revise existing slides, please forward them to USACHPPM Health Information Operations for future updates. We will post updates on a regular basis.
